## 1 We have three types of section names - this is biggest

### 1.1 One smaller

#### 1.1.1 Smallest

## 2 Section numbers are automatically generated

Figure 1: Play with the width variable of this image

That's it really. You usually write here. If you want a new paragraph, you need to make a newline in the .tex

file just like this. Every paragraph is indented by default. If you want to include math, use the \$ symbol at each end of your equation just like this:  $x + y = 0.0$ . There is tons of examples online that you can refer to if you have any specific questions but for now this should suffice.
